LAWSONIANA

Blue

TO VISIT US—Taunton Street is first right after you leave the Middleboro traffic circle on Route 28 to the Cape. We have some fine plants in 6" pots at the greenhouse at \$4.00 and up. Varieties limited.

Clematis Planting Directions

Plant in well-drained soil. Dig a good-sized hole, removing sub-soil if possible, and fill with a good loam or compost, adding a small handful of lime and about the same amount of bonemeal or fertilizer, mixing all together well.

Plant with the crown of plant about two inches below the surface level, firming soil well around the roots; stake immediately so slender stems will not whip with the wind.

Clematis should have at least a half day of sun and will not tolerate full shade. A mulching of peat or light litter is beneficial during the summer months; also, very late in the fall I like to hill around the base of the plants with a light loam or compost for the winter.
